Patrick Kearney

Software Engineer · 4+ years of experience

Backend-focused software engineer building transactional services, third-party integrations and workflow-driven APIs on AWS. I design for reliability and security, and ship well-tested code in Java and TypeScript.

EXPERIENCE

Software Engineer · Mobility Global

Oct 2026 – Present · London, ON

- Extend the checkout service to sell multiple products in one order, calculating and storing tax for each product individually, to support a new team being onboarded.
- Use Claude Code as an agentic AI coding tool to ship faster and raise code quality.

Software Engineer · CARFAX

Mar 2025 – Sep 2026 · London, ON

- Helped plan, design and build a new payments and tax platform on the open-source MedusaJS commerce framework, using its built-in data model to speed up delivery.
- Built and maintained services covering cart creation and the full payment lifecycle (authorize, capture, refund) across multiple payment providers, using synchronous and asynchronous workflows.
- Implemented per-team payment-provider configuration, managing multiple credentials per processor with AWS Secrets Manager.
- Persisted customer, cart, order, product, payment, address and custom data in PostgreSQL.
- Designed a Java 17 Tax API, first used directly by two teams, then centralized behind checkout APIs that let product teams create, update and complete payment sessions.

Java 17, TypeScript, MedusaJS, PostgreSQL, AWS Secrets Manager, Vertex

Associate Software Engineer · CARFAX

Jan 2022 – Mar 2025 · London, ON

- Maintained integrations with multiple payment providers for the consumer purchase flow.
- Upgraded payment services from Java 8 to Java 17 and replaced a 20-year-old payment-gateway SDK with direct, API-driven integrations.
- Rewrote a legacy Java 8 application as a TypeScript AWS Lambda and cut traffic over at the API gateway with zero downtime. Added automatic 30-day rotation of its encryption key.
- Built a Google Pay proof of concept on the checkout page and ran an A/B test to measure its value. The data showed it wasn't worth the added complexity, so we chose not to roll it out.

Java, Spring Boot, TypeScript, AWS Lambda, AWS Secrets Manager

EDUCATION

Computer Programming Analyst · Fanshawe College

2018 – 2021 · London, ON

★ President's Honour Roll

SKILLS

Languages: Java, TypeScript, JavaScript, SQL, C++
Backend & APIs: Spring Boot, Node.js, Express, MedusaJS, REST, OpenAPI / Swagger, Zod, Jackson, Lombok
Cloud (AWS): Lambda, API Gateway, ECS / Fargate, RDS / Aurora, SQS, S3, EventBridge, SES, EC2, IAM, KMS, Secrets Manager, CloudWatch
Infrastructure & CI/CD: AWS CDK, Terraform, Serverless Framework, Docker, Docker Compose, Gloo Gateway, GitLab CI, Jenkins
Databases: PostgreSQL, MySQL, Redis, DynamoDB, MongoDB
Payments & Commerce: PayPal, Amazon Pay, Google Pay, Chase Orbital, Vertex (tax), PCI DSS (SAQ A & D), Optimizely A/B testing
Testing: JUnit, Mockito, Jest, Vitest, React Testing Library, Playwright
Frontend: React, Next.js, Tailwind CSS
Observability: New Relic, Grafana, PagerDuty, CloudWatch
Build & Dev Tools: Gradle, Maven, npm, Yarn, Prettier, IntelliJ IDEA, VS Code, Postman, Bruno, Linux, Bash / Zsh
Collaboration: Git, GitHub, GitLab, Bitbucket, Jira, Confluence, Agile
AI-Assisted Development: Claude Code, GitHub Copilot
Currently Learning: Agentic AI-first development, AWS ML Engineer – Associate (studying)

PROJECTS

This Website

A statically exported Next.js resume site with an interactive terminal and a mini-golf game built on canvas with hand-written physics. Typed content, JSON-LD for search, and unit, end-to-end and accessibility tests in CI.

Next.js, TypeScript, Tailwind CSS, Canvas API, Vitest, Playwright
